

# PADMATY 20S

20 buttons intelligent Inwall Keypad – IR, RS232, MBC Bus

## Low cost

PADMATY 20S is a powerful keypad with 20 backlighted buttons (blue leds).

The keypad is delivered with 192

interchangeable pre-silked buttons in order to be adapted to the installation.

Masks can be set up to play a macro or a simple command. It's programmed with PC2MATY software and directly loaded into the keypad through RS232 port. The way to turn on/off or blinking of each key's backlight can be defined.

## Direct control and evolutionary

The autonomy of PADMATY 20S touch panel can directly control, without controller, any infrared or RS232 on wired buses. If the integration requires more control, a third port enables a connection on MBC Bus to pilot all controllers of the Vity range and to spread the control and to manage more inputs/outputs (RS-232, GPI, relais, 0-10 volts, ...).

## Web control

Control your installation from anywhere. If you use a VITYLAN, a Minimono/IP or a Multicustom/IP; you can change our web server into a virtual PADMATY 20S. Java programme will be loaded in the web server then showed on your screen monitor. Yet must only click to control your installation with security. The installation can be piloted by Ethernet too. Display on the PADMATY 20S LCD screen of controls realised at distance.
